THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN **THREE MONTHS** FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. **THIS STATUTORY PERIOD CANNOT BE EXTENDED.** SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

DETAILED ACTION

Response to Amendment

Applicant's amendment filed 24 November 2009 has been entered. Claim 1 has been amended. Claims 1, 2, 4, 5, 7, 8 and 10-15 are still pending in this application, with claims 1 and 10 being independent. Please note that AU 2416 has been change to AU 2474.

Response to Arguments

1. Applicant's arguments, see Remarks, filed 24 November 2009, with respect to claims 1 and 10 have been fully considered and are persuasive. The rejection of the claims has been withdrawn.

Examiner Amendment

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Donald Studebaker (Reg. No. 32,815) on 5 February 2010.

Replace claim 1 with the following:

Claim 1. A method of controlling a jitter buffer using a FIFO, a packet deletion circuit, a packet addition circuit, and a jitter buffer control circuit, comprising the steps of:

setting a packet delete area, a packet add area, and a clock control area inside the FIFO;

controlling a stored packet quantity of the FIFO to delete a specified packet from an input side of the FIFO when the stored packet quantity exceeds a lower limit of the packet delete area, and to delete the packets when the stored packet quantity exceeds an upper limit of the packet delete area;

controlling the stored packet quantity of the FIFO to add a specified packet when the stored packet quantity falls below an upper limit of the packet add area, and to add the packets when the stored packet quantity falls below a lower limit of the packet add area;

raising a clock frequency when the stored packet quantity of the FIFO reaches an upper limit of the clock control area;

lowering the clock frequency when the stored packet quantity of the FIFO reaches a lower limit of the clock control area; and

setting the clock control area between the packet add area and the packet delete area.

Allowable Subject Matter

3. Claims 1, 2, 4, 5, 7, 8 and 10-15 are allowed.
4. The following is an examiner's statement of reasons for allowance:

Claims 1, 2, 4, 5, 7, 8 and 10-15 are allowable over the prior art since none of the prior art taken individually or in combination particularly discloses, fairly suggests, or renders obvious each and every claimed limitation.

Previously cited prior art reference to LeBlanc discloses a system comprising a jitter buffer that reduces jitter by changing the rate of retrieval according to whether certain thresholds are being reached in the buffer. However, the thresholds used and tracked in the buffer of LeBlanc are holding time thresholds, wherein if the holding times of packets in the buffer exceed a threshold, then the rate of retrieval is increased so that those packets can be pushed out of the buffer. In addition, LeBlanc does not delete packets from a delete area of his jitter buffer.

Previously cited prior art reference to Kramer et al. discloses a jitter buffer management system that manages jitter by inserting and deleting packets to stay within the high watermark and the low watermark of the threshold. Kramer attempts to reduce the jitter by varying the size of the jitter buffer to adjust to the fill level of the buffer. While Kramer deletes and inserts packets in the buffer, Kramer does not disclose a packet delete area, a clock control area, and a packet add area. Also, Kramer relies on varying the size of the buffer, and not varying the clock rate at which the packets are retrieved.

Therefore, neither the above-mentioned prior art, nor the other prior art of record, teach each and every claim limitation, including setting a packet delete area that has an upper limit and

a lower limit, setting a packet add area that has an upper limit and lower limit, and setting a clock control area with an upper limit and a lower limit.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

In addition, claims 1, 2, 4, 5, 7 and 8 are allowable over 35 USC 101 because they are now tied to the packet deletion circuit, the packet addition circuit and the jitter buffer circuit.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Curtis A. Alia whose telephone number is (571) 270-3116. The examiner can normally be reached on Monday through Friday, 9am-6pm EST.
